This free Planet Generator Kit is a starter set of files for procedural planet creation in Unity using Shader Graph.

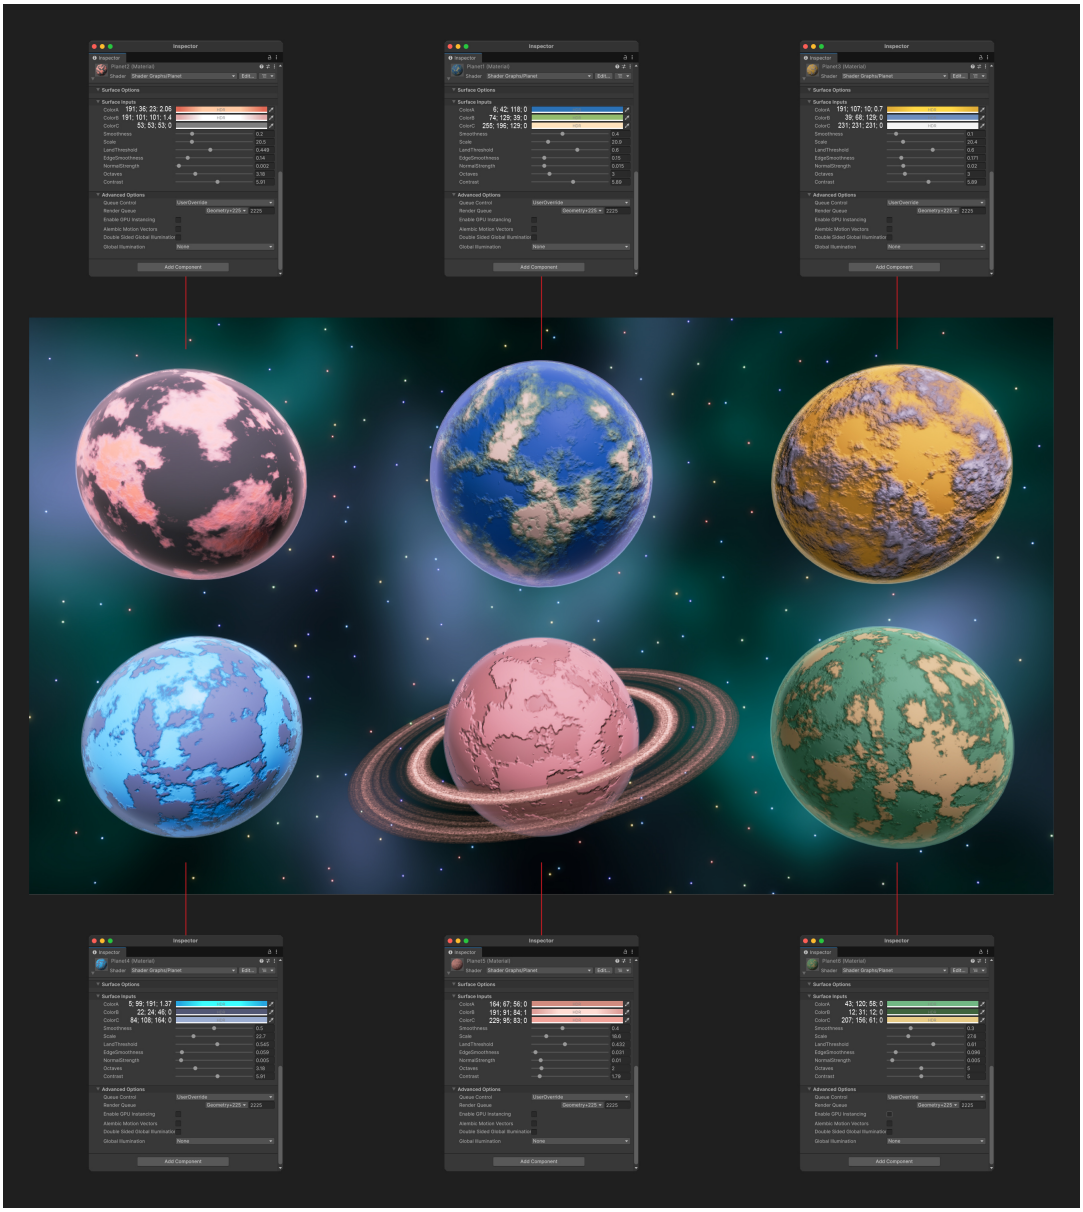

It is designed for game developers, technical artists, and VFX artists who want to create Sci-Fi planets for their projects.

To use this kit, place the files from this archive into your Unity project. Then follow the step-by-step tutorial video to recreate and customize procedural planets using Shader Graph.

If you have any questions, feel free to ask them in the comments under the video, and I'll be happy to answer them.

Example settings for planet materials (color coding - R; G; B; Intensity)
